## Introduction

When it comes to the future, the world is moving toward modernization, which includes the provision of Electronic Shopping (eShopping) with its convenience, security, and comfort; what we plan to build is something similar, and it is a website that provides products from around the world of various qualities (depending on the price given). In Kazakhstan, the KARE, LCWAIKIKI, Sulpak, Arbuz, Pricer, and Pricer are well-known projects.kz, Oriflame, and others; our website can be competitive when it comes to convenience of use and price banding. We can offer low costs and high quality because we believe that by advertising for them for free on our website, we may obtain nice products at a lower cost than wholesale. Receiving high-quality products for a low price and selling them to clients at a lower price than competitors can benefit both us and the companies. Customers can be from all over the world since we can have contracts with businesses all over the world.

## Why your solution is better than others.

Types of projects in which entrepreneurs and businesses might find beneficial tools to help them run their businesses. Our website will be built using these projects as a foundation. All in all, in the table below the drawbacks, are demonstrated briefly;

## 1. LC WAIKIKI.kz

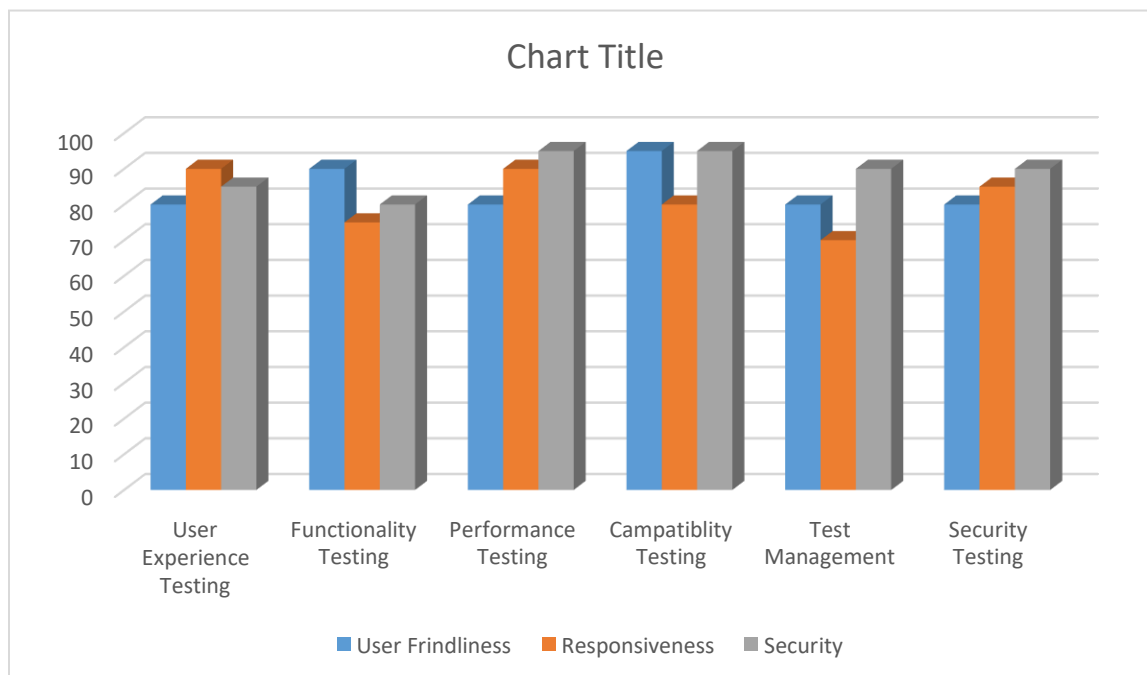

lcwaikiki.kz, operated by LC Waikiki Mağazacılık Hizmetleri Ticaret A.Ş., an internet business that sells across the country. Kazakhstan accounts for nearly all its eCommerce net sales. In terms of product range, the "Fashion" category accounts for the majority of lcwaikiki. kz's eCommerce net sales. The offer also includes products from the "Furniture & Appliances" area. In fact, the website's only shortcoming is that it lacks the ability to search for a certain brand among the items and add them to a Wishlist. This feature will be available on our website, allowing you to search for your favorite brand and items and add them to your Wishlist.

## ZETA

Since 1996, Kazakhstani manufacturing business ZETA has been a solid leader in the production of a wide range of furniture, plastic, and metal items on the national market. The ZETA retail network is rapidly expanding, with more than 50 locations in 26 Kazakhstan cities and many subsidiaries in CIS countries. The production's major business is making upholstery and cabinet furniture, as well as armchairs, chairs, and tables for the home and office. It has two disadvantages. The first is that this website does not provide services 24 hours a day, seven days a week, and the second is that the registration and purchase processes are complicated.

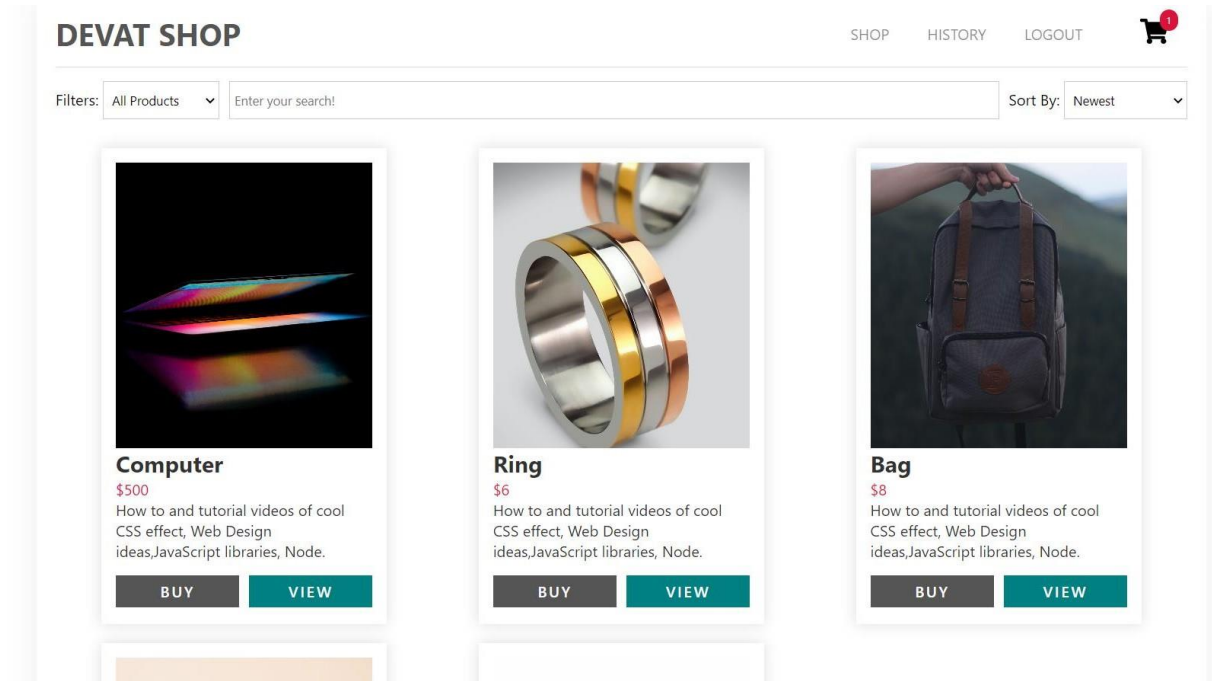

## Software Testing

The process of testing is carried out on several features depicted below.

## Demonstration of the finished project

Home page and Products, filters, search bar.
